

EXPERIMENT-5

ROLL NO: 240701058

NAME: ASHWIN C

USER INTERFACE AND DESIGN

Conduct task analysis for an app (e.g., movie ticket booking) and document user flows. Create corresponding wireframes using Lucidchart.

AIM:

To understand and document the steps a user takes to complete the main tasks within a movie ticket booking app.

PROCEDURE:

Step 1: Assigning Tasks

1. User Authentication and Guest Access
2. Browsing and Selecting a Movie
3. Selecting Theater, Show Time, and Checking Seat Availability
4. Processing Payment and Generating Ticket

Step 2: Document User Flows

1. User Authentication and Guest Access:
 1. Open App: User lands on the platform via "Open website/App".
 2. Authentication: User is prompted with a "Login/Register?" decision.
 3. Logged in: If 'Yes', the user will "Enter Details" and proceed to the "Home Page".
 4. Guest: If 'No', the user will "Continue as Guest".

Flow: Open website/App -> Login/Register? -> (Yes: Enter Details -> Home Page) / (No: Continue as Guest) -> Browse Movies

2. Browsing and Selecting a Movie:
 1. Browse: User begins to "Browse Movies".
 2. Selection: User decides to "Select Movie".

Flow: Browse Movies -> Select Movie

3. Selecting Theater, Show Time, and Checking Seat Availability:
 1. Show Details: User proceeds to "Select Theater & Show Time".
 2. Seat Check: The system verifies "Seat Available?".
 3. Unavailable: If 'No', the user must "Select Different Show".

Flow: Select Theater & Show Time -> Seat Available? -> (No: Select Different Show) / (Yes: Proceed to Payment)

4. Processing Payment and Generating Ticket:
 1. Checkout: User continues to "Proceed to Payment".
 2. Verification: The system checks "Payment Successful?".
 3. Failure: If 'No', the user is prompted to "Retry Payment".
 4. Success: If 'Yes', a "Ticket Generated" status is reached.
 5. Completion: The system will "Display Ticket" and the process reaches "Stop".

Flow: Proceed to Payment -> Payment Successful? -> (No: Retry Payment) / (Yes: Ticket Generated) -> Display Ticket -> Stop

Step-by-Step Procedure to Create User Flows in Lucidchart:

Create a New Document:

- Go to Lucidchart and sign in or sign up if you don't have an account.
- Click on + Document or Create New Diagram.

Select a Template:

- You can start with a blank document or select a flowchart template.
- For this example, let's start with a blank document.

Add Shapes for Each Step

- Drag and drop shapes from the left sidebar to represent different steps in your flow (e.g., rectangles for actions, diamonds for decisions).
- Name each shape based on the steps from the task analysis:
 - Open website/App
 - Login/Register?
 - Browse Movies
 - Proceed to Payment

Connect the Shapes

- Use connectors to link the shapes, indicating the flow from one step to next.
- Add arrows to show the direction of the flow.

Add Details to Each Step

- Double-click on each shape to add text describing the action or decision.
- For example, for the "Login/Register?" step, you might add a "Yes" path and a "No" path.

Use Different Shapes for Different Actions

- Use rectangles for general actions.
- Use diamonds for decision points (e.g., "Seat Available?").
- Use ovals for start and end points (e.g., "Start" and "Stop").

Customize and Organize Your Flowchart

- Arrange the shapes and connectors logically.
- Use different colors to distinguish between types of steps or user roles.
- Group related steps into sections for better clarity.

Review and Save Your Flowchart

- Review the flowchart to ensure all steps are included and connected correctly.
- Save your flowchart by clicking on File -> Save.

Share and Collaborate

- Click on the Share button to collaborate with others.
- You can also export your flowchart as an image or PDF for presentation purposes.

Example Flowchart Breakdown:

- Login/Register Flow
- Browse and Select Movie Flow
- Seat Availability Flow
- Payment and Ticket Generation Flow
